

Ultrafiltration Membrane for Water Filtration

This ultrafiltration (UF) membrane is designed for water filtration systems. It is available in models KC4040-4 and KC8040-20.

Product Overview

Ultrafiltration Membrane Technology

These high-performance ultrafiltration membranes are engineered for precision water filtration applications. Designed to handle various flow requirements, they effectively separate purified water from high-density concentrate streams. These modules are built for durability and consistent filtration efficiency in industrial water treatment setups.

Technical Specifications

Dimensions and Flow Specs

Parameter	Value
KC4040-4 Diameter	4 inch (101 mm)
KC8040-20 Length	40 inch (1016 mm)
Inlet/Outlet Connections	0.75 inch (19 mm) to 1.05 inch (27 mm)

Model Variants	KC4040-4, KC8040-20
