

Ultrasonic Pest Repeller

The ultrasonic pest repeller emits high-frequency sound waves to repel rodents and insects. This device is designed for indoor use by plugging into a standard electrical outlet.

Overview

Effective Non-Toxic Pest Control

This ultrasonic pest repeller is an electronic device engineered to emit high-frequency sound waves that effectively deter rodents, insects, and other pests. Designed for indoor environments, the unit plugs directly into standard electrical outlets for continuous, hassle-free operation. It serves as an environmentally friendly and non-toxic alternative to traditional chemical pest control methods, ensuring a safer space for occupants.

Technical Specifications

Recommended Use

Indoor

Model Number

HS-109

Installation

Plug-in (Standard Electrical Outlet)

Target Pests

Rodents, Insects

Features

Key Features

- High-frequency ultrasonic wave emission
- Compact and lightweight design
- Integrated indicator light
- Multiple sound emission vents
- Non-toxic and chemical-free operation
