

Underfloor Heating Element

This underfloor heating element provides efficient and uniform heat distribution. It is designed for long-lasting performance and reliable operation in residential and commercial buildings.

Product Overview

High-Quality Heating Solution

This circular underfloor heating element is engineered for efficient and uniform heat distribution in both residential and commercial heating systems. It features a robust metallic base with dedicated electrical connectors and a protective metallic cover for enhanced durability. Designed with integrated mounting points, it ensures reliable operation and straightforward installation for professional heating projects.

Technical Specifications

Suitable Environments

- Residential buildings
- Commercial buildings

Form Factor	Circular
Construction Material	Metal Base, Metallic Cover

Features

Performance Highlights

Uniform Heat Distribution • Durable Construction • Easy Mounting
