

Underground Mining Scooptram

This specialized mining machinery is designed for underground mineral extraction. It features a robust design, compact size for confined spaces, and multiple battery compartments for extended operation.

Overview

Underground Mining Scooptram

This specialized mining machinery is engineered for efficient mineral extraction in demanding underground environments. Its compact design allows for maneuverability in confined spaces, while the robust construction ensures reliability during heavy-duty operations. Equipped with multiple battery compartments, the unit is optimized for extended operational endurance.

Design & Build

Suitable Environments

- Underground mining
- Confined spaces
- Mineral extraction sites

Color Scheme

Yellow, Blue

Performance

Power System

Battery-powered • Multi-compartment

Key Operational Metrics

1 Extended

Operational Focus
