

Unfinished Valve Components

These are cast metal valve components designed for fluid control systems. The unfinished or partially machined parts feature various port shapes and flange connections, with a blue coating.

Product Overview

Unfinished Valve Components

These unfinished valve components are designed for industrial fluid control systems requiring high-quality cast metal foundations. The parts feature various port configurations and flange connections, providing a versatile base for custom machining and final assembly. Each component is finished with a protective blue coating to ensure integrity during transport and storage before further processing.

Technical Details

Surface Coating

Protective Primer • Blue Coating

Material

Cast Metal

Application

Fluid Control, Industrial Machinery, Manual Tooling

Configuration

Key Features

- Integrated flange connections
- Multiple port configurations
- Cast base ready for machining
