

Uninterruptible Power Supply (UPS)

These uninterruptible power supplies provide backup power during power outages. They ensure continuous operation of connected devices.

Overview

Reliable Power Protection

This Uninterruptible Power Supply (UPS) system is engineered to provide essential backup power during unexpected outages. Featuring a robust metal enclosure with efficient ventilation, the unit ensures continuous operation and protection for sensitive connected devices. It is an ideal solution for maintaining uptime in professional environments where power stability is critical.

Technical Specifications

Connectivity

- Input power connectors
- Output power connectors

Enclosure Material	Metal
Cooling Design	Perforated top for ventilation
Key Features	Backup Power, Continuous Operation, Overload Protection
