

Uninterruptible Power Supply (UPS)

This UPS (Uninterruptible Power Supply) offers backup power during outages. It ensures continuous operation of connected devices, preventing data loss and equipment damage.

Product Overview

Professional Uninterruptible Power Supply

This Uninterruptible Power Supply (UPS) is engineered to provide reliable backup power for critical electronics, ensuring continuous operation during unexpected power outages. By incorporating automatic voltage regulation and surge protection, the unit prevents data loss and safeguards sensitive hardware. It is an ideal solution for maintaining uptime in office environments, data centers, and critical networking infrastructure.

Core Performance

Performance Highlights

1500 VA
Capacity

900 W
Power Output

Technical Details

Technical Specifications

Parameter	Detail
Function	Backup Power & Surge Protection
Regulation	Automatic Voltage Regulation (AVR)
Application	Computers, Servers, Networking

Features

Key Capabilities | Surge Protection, Battery Backup, Voltage Regulation, Data Loss Prevention
