

Uninterruptible Power Supply (UPS) for Critical Equipment

This uninterruptible power supply (UPS) provides reliable backup power and voltage regulation for critical equipment. It ensures continuous operation during power outages, voltage sags, and surges, protecting sensitive electronic devices from damage and data loss.

Overview

Reliable Power Protection

The KR11T Series is a high-performance uninterruptible power supply (UPS) engineered to provide reliable backup power and voltage regulation for mission-critical equipment. Utilizing advanced double-conversion technology, it delivers clean, stable power while protecting sensitive electronics from outages, surges, and voltage sags. It is an ideal solution for safeguarding servers, networking equipment, and industrial infrastructure.

Applications

Supported Equipment

- Servers
- Routers
- Point-of-sale (POS) systems
- Network hubs

Suitable Environments

Data Center, Computer Room, Commercial Facility, Precision Instrument, Networking Hub

Features

User Interface

LCD Display • Real-time Monitoring • Status Indicators

Protection Features

- Double-conversion technology
- Voltage sag protection
- Surge suppression
- Continuous operation during outages
