

Uninterruptible Power Supply (UPS) for Critical Systems

This uninterruptible power supply (UPS) is designed for critical systems. It features robust power conditioning, surge protection, and battery backup to ensure continuous operation during power outages.

Overview

High-Performance UPS for Critical Systems

The Security Manager extreme 8000 is a robust uninterruptible power supply engineered to safeguard sensitive electronic equipment during power outages. It provides essential power conditioning and surge protection to ensure continuous, stable operation for servers and high-end workstations. Designed for reliability, the unit features advanced monitoring and remote management capabilities to keep your infrastructure running smoothly.

Technical Specifications

Input Voltage

230 V

Rated AC Input

Recommended Applications

Servers, Workstations, Sensitive Electronics, Critical Systems

Features

Core Functionalities

- Robust power conditioning
- Advanced surge protection
- Continuous battery backup
- Remote monitoring and control
