

Uninterruptible Power Supply with AVR

This uninterruptible power supply provides reliable backup power for critical electronic equipment. It includes advanced battery management and automatic voltage regulation.

Overview

Professional Power Protection

This high-performance Uninterruptible Power Supply (UPS) is engineered to provide reliable backup power and essential surge protection for critical electronic infrastructure. Equipped with Automatic Voltage Regulation (AVR) and advanced battery management, it effectively mitigates risks from power outages and voltage fluctuations. It is an ideal solution for safeguarding sensitive equipment such as servers, networking hardware, and professional computer systems.

Key Features

Core Features

AVR Integrated, Surge Protection, Battery Management, Backup Power

Application Suitability

Recommended Usage

- Servers and Data Centers
- Networking Devices
- Professional Workstations
- Sensitive Electronic Equipment
