

Uninterruptible Power Supply with Battery Backup

This uninterruptible power supply (UPS) provides backup power in the event of a power outage. It is designed to protect sensitive electronic equipment from damage due to power surges, spikes, and brownouts.

Overview

Reliable Power Protection

This Uninterruptible Power Supply (UPS) is engineered to safeguard sensitive electronic equipment against power instability. It provides essential backup power during outages while actively filtering surges, spikes, and brownouts. Designed for critical infrastructure, it ensures continuous operation for computers and networking hardware.

Technical Specifications

Suitable Applications

- Computers
- Networking Equipment
- Critical Electronic Devices

Model Identifier	UPS-1000
Key Protection Features	Battery Backup, Surge Protection, Automatic Voltage Regulation (AVR)
