

Universal Aluminum Roof Rack Cross Bars

Universal roof rack cross bars are designed for vehicles with existing raised side rails. The bars are constructed from high-strength aluminum for durability and corrosion resistance.

Product Overview

Universal Aerodynamic Roof Rack System

These universal roof rack cross bars are engineered for vehicles already equipped with raised side rails. Constructed from high-strength aluminum, they offer excellent durability and resistance to corrosion in various weather conditions. The aerodynamic profile is specifically designed to minimize wind noise and drag, ensuring a quieter ride while providing a stable platform for transporting luggage, bikes, and kayaks.

Technical Specifications

Load Capacity

150 lbs

Maximum Load Capacity

Construction Material	High-strength Aluminum
Compatibility	Raised Side Rails, Universal Fit

Features

Product Features

- Aerodynamic profile for reduced wind noise
- Corrosion-resistant aluminum construction
- Adjustable clamps for secure installation
- Includes all necessary mounting hardware
