

# Universal Cutter Grinding Machine for Engraving and Etching

This universal cutter grinding machine is designed for precision engraving and etching applications. The machine tool is engineered for non-traditional machining processes, providing versatility and accuracy in cutter grinding operations.

## Overview

### Precision Universal Cutter Grinding

This universal cutter grinding machine is engineered specifically for precision engraving and etching applications. Designed for versatility and accuracy, it supports non-traditional machining processes to deliver high-quality surface finishes. It is an ideal solution for maintaining dimensional accuracy across a wide variety of materials and cutter types.

## Technical Specifications

### Primary Applications

- Engraving
- Etching
- Cutter Grinding

### Machine Classification

Universal • Non-traditional Machining

### Available Models

KXM10B, KXM10C
