

Universal Metal Milling Machine

This universal tool milling machine is designed for versatile metal processing operations. The robust machine features a vertical milling head, precision controls, and a sturdy frame for accurate and efficient material removal.

Overview

Universal Tool Milling Machine

This universal tool milling machine is engineered for versatile and precise metal processing operations. Featuring a robust frame and a dedicated vertical milling head, it ensures stability and high-quality material removal across a variety of metal workpieces. Designed with precision controls, this machine is an ideal solution for professional machining environments requiring accuracy and efficiency.

Technical Specifications

Model Numbers	XS8140A, X8140A
Machine Type	Universal Tool Milling Machine

Key Features

Operational Capabilities

- Versatile metal processing
- Vertical milling operations
- Precision control system
- Sturdy frame construction
