

Universal Milling Machine

This universal milling machine is designed for a broad spectrum of machining operations. It features a robust build, variable spindle speeds, and precise controls, making it suitable for toolrooms and small-batch production.

Overview

Versatile Machining Performance

This universal milling machine is expertly engineered to handle a diverse range of machining operations including drilling, tapping, and precision milling. Its robust construction ensures stability during intensive tasks, making it an ideal solution for toolrooms, repair shops, and small-batch production environments. Equipped with a swivel head and a versatile three-axis movement system, this machine offers the flexibility required to accommodate a wide variety of workpiece sizes and shapes.

Technical Specifications

Axis Movement

- X-axis
- Y-axis
- Z-axis

Machining Capabilities

Milling, Drilling, Tapping

Operational Features

Feed Options

Manual Feed • Power Feed

Head Type

Swivel Head
