

Universal Milling Machine

This universal milling machine is designed for a wide range of machining operations, including milling, drilling, and boring. It features a rigid construction with a vertical spindle and a versatile worktable.

Product Overview

Universal Knee-type Milling Machine

The Universal Knee-type Milling Machine (models X6230A and X6230A-1) is a versatile industrial tool designed for precision machining operations. Its rigid construction supports a variety of tasks including milling, drilling, and boring. Equipped with a vertical spindle and manual controls, this machine offers the reliability required for toolrooms, workshops, and small-scale production environments.

Technical Features

Core Machining Capabilities

- Milling
- Drilling
- Boring

Design Highlights

Rigid Construction • Universal Worktable

Standard Equipment

Vertical Spindle, Manual Controls, Coolant System

Application

Suitable Environments

- Toolrooms
- Workshops
- Small-scale production
