

Universal Motor for Blenders, Coffee Makers, and Juicers

High-speed universal motor designed for blenders, coffee makers, and juicers. It features a robust stator and armature winding configuration for efficient power conversion, optimized cooling vents for thermal management, and durable carbon brushes for extended motor life.

Product Overview

High-Performance Universal Motor

This high-speed universal motor is precision-engineered for versatile use in small kitchen appliances such as blenders, coffee makers, and juicers. It features a robust stator and armature winding configuration designed for efficient power conversion and reliable performance. With integrated cooling vents for thermal management and durable carbon brushes, this motor is built for extended operational life and consistent output.

Compatible Appliances

Blenders, Coffee Makers, Juicers

Technical Features

Key Design Features

- High-speed universal design
- Robust stator and armature winding
- Optimized cooling vents for thermal management
- Durable carbon brushes for extended life
