

Universal Motor for Vacuum Cleaners

This high-performance universal motor is designed for vacuum cleaners and similar appliances. Its robust construction includes a wound stator and armature, delivering efficient power and reliable operation.

Product Overview

High-Performance Universal Motor

This universal motor is specifically engineered for vacuum cleaners and similar household appliances. It features robust construction with a wound stator and armature, ensuring efficient power delivery and reliable long-term operation. Equipped with an integrated cooling fan, the motor maintains optimal temperatures during use, significantly extending its operational lifespan.

Technical Specifications

Motor Type	Universal Motor
Construction Features	Wound Stator, Wound Armature, Integrated Cooling Fan
Primary Application	Vacuum Cleaners and similar appliances

Design & Integration

Design Benefits

- Compact design for easy integration
- Temperature management system
- Versatile voltage and power compatibility
