

Universal Tool Grinder

This universal tool grinder is designed for precision grinding of various cutting tools. It features adjustable grinding angles, a versatile clamping system for secure tool holding, and a robust construction for stability and durability.

Overview

Precision Grinding Solution

The Universal Tool Grinder is engineered for the precise maintenance and sharpening of a wide range of cutting tools. Featuring adjustable grinding angles and a versatile clamping system, this machine ensures secure tool holding and consistent results. Its robust construction provides the stability required for demanding workshop environments, while the integrated coolant system prevents overheating to maintain optimal grinding performance.

Capabilities

Compatible Tools

- Lathe tools
- Milling cutters
- Drills
- General cutting implements

Features

Performance Focus

High Precision • Stability • Durability

Key Features

Adjustable Grinding Angles, Versatile Clamping System, Robust Construction, Fine Adjustment Controls, Integrated Coolant System
