

Universal Vertical Horizontal Milling Machine

This universal milling machine is designed for both vertical and horizontal machining operations. It features a robust construction ensuring stability and precision, suitable for use in toolrooms, workshops, and manufacturing.

Overview

Versatile Machining Capability

This universal milling machine features a dual-spindle design, offering both vertical and horizontal machining capabilities in a single unit. Built with a focus on stability and precision, it provides reliable performance for toolrooms, workshops, and demanding manufacturing environments. The integrated control panel ensures efficient management of spindle speeds and feed rates for diverse milling tasks.

Key Features

Applications

- Toolroom machining
- General workshop tasks
- Manufacturing production

Machine Type

Universal, Vertical, Horizontal

Operational Controls

Control Features

- Integrated control panel
- Adjustable speed control
- Adjustable feed rate management

Construction

Design & Stability

Robust Construction • Vertically Adjustable Head • Precision Engineered
