

Untoothed Bandsaw Blade

This bandsaw blade is manufactured from high carbon spring steel strips. It is designed to be punched with different teeth patterns according to the end-users specific requirements.

Product Overview

Untoothed Bandsaw Blade

This untoothed bandsaw blade is precision-engineered from high-carbon spring steel, designed for specialized cutting applications or custom tooth profiling. Its smooth, continuous edge ensures consistent performance, making it a reliable choice for industrial bandsaw machines. The blade is manufactured using high-grade materials to ensure durability and resistance to wear during operation.

Material Composition

Compatible Steel Grades	65Mn, SAE1075, T8, T10
Material Type	High Carbon Spring Steel

Logistics

Packaging	Standard export package
