

Urea, 300,000 tons/year Capacity

This is a chemical production engineering plant designed for urea production. The facility has a substantial capacity of 300,000 tons per year.

Overview

Urea Production Facility Overview

This high-capacity urea production facility is engineered to meet large-scale industrial requirements with an annual output of 300,000 tons. The plant features an advanced design incorporating state-of-the-art distillation columns and reactor systems to ensure operational efficiency. It provides a robust solution for chemical manufacturing, emphasizing safety and reliable performance through modern process control systems.
