

USB Data Cable with Braided Shielding

This USB data cable features a multi-layered construction. The cable consists of four internal wires, each insulated and surrounded by braided shielding, encased in a durable black outer jacket.

Overview

High-Performance Data Transmission

This USB data cable is engineered for reliable connectivity and durability in demanding environments. Featuring a robust multi-layered construction, it ensures stable signal integrity through advanced internal shielding. The braided design provides enhanced mechanical protection, making it an ideal choice for professional-grade industrial and commercial applications.

Construction

Shielding Type

Braided Shielding

Internal Configuration

4 wires

Insulation Material Color

Yellow

Outer Jacket Finish

Durable Black

Features

Key Features

- Multi-layered construction
- Braided shielding for interference protection
- High-durability outer jacket
