

Used CNC Machine Tool for Metal Forming

This is a used CNC machine tool designed for metal forming. It is equipped with a robust frame and a flywheel for energy storage.

Product Overview

Industrial Metal Forming Capability

This pre-owned CNC machine tool is engineered for robust metal forming operations including punching, bending, and drawing. The equipment features a heavy-duty frame design with an integrated large flywheel system designed for consistent energy storage during cycles. Ideally suited for industrial applications requiring reliable mechanical force, this unit offers a professional solution for secondary market metalworking requirements.

Technical Specifications

Equipment Class	CNC Machine Tool, Mechanical Power Press, Metal Forming
-----------------	---

Logistics and Origin

Import Status
Second-hand • Imported

Logistics Hub	Tianjin Port
