

Used Industrial Piston Air Compressor for Mining Applications

This is a used piston air compressor suitable for heavy-duty mining or construction applications. It features a robust engine, a large air tank, and a multi-cylinder compressor unit for reliable performance.

Product Overview

Heavy-Duty Industrial Performance

This used piston air compressor is engineered for demanding industrial environments, including mining and construction sites. Featuring a robust multi-cylinder design and a large, wheel-mounted air tank, it offers the durability and portability required for challenging operational conditions. The unit is equipped with essential gauges and valve systems to ensure precise pressure control and monitoring during heavy-duty tasks.

Technical Specifications

Compressor Type	Piston Air Compressor
Suitable Applications	Mining, Construction, Industrial
Model Identifier	IFG/GXKXK06-110-00076

Design & Features

Key Features

- Robust multi-cylinder compressor unit
- Large capacity air tank
- Integrated pressure gauges and valves
- Heavy-duty wheel-mounted chassis

Portability	Yes
