

Used Industrial Piston Air Compressor for Mining

This is a used piston air compressor designed for industrial applications, particularly in mining. It delivers compressed air for powering pneumatic tools and equipment on-site.

Product Overview

Robust Industrial Air Compression

This used industrial piston-driven air compressor is engineered for demanding environments, including mining operations. Featuring a heavy-duty construction with a large electric motor and twin air tanks, it provides reliable compressed air for pneumatic tools and equipment. Its durable, wheeled frame ensures portability, while integrated pressure gauges and safety valves allow for precise air regulation and distribution.

Technical Specifications

Model Designation	2V3.5/5
Compressor Type	Piston-driven
Primary Applications	Mining, Industrial, Pneumatic Tools

Design & Build

Key Features

- Twin air tanks
- Portable wheeled frame
- Integrated pressure gauges
- Safety valves included
- Heavy-duty electric motor

Equipment Status

Used
