

# Used Mining Piston Air Compressor

This is a used piston compressor designed for mining and industrial applications. It utilizes a reciprocating piston design with multiple cylinders, powered by an internal combustion engine, and includes an air receiver tank.

## Overview

### Robust Mining Compressor

This used piston air compressor is engineered for heavy-duty industrial and mining operations. Featuring a multi-cylinder reciprocating design, it is built to deliver consistent air pressure in demanding environments. The unit is designed for portability and independence, making it an ideal solution for remote job sites requiring reliable compressed air.

## Technical Specifications

Model Designation	W1.5/4
Certification ID	XK06-010-0432
Compressor Type	Reciprocating Piston
Power Source	Internal Combustion Engine (Diesel)

## Features

### Included Components

- Multi-cylinder piston block
- Air receiver tank
- Integrated pressure gauges
- Safety valves

Suitability	Mining, Industrial, Remote Sites, Heavy-Duty
