

Used Piston Air Compressor for Mining

This is a used piston air compressor designed for heavy-duty mining applications. It provides a consistent air supply for powering pneumatic tools and equipment.

Overview

Industrial-Grade Mining Compressor

This used piston air compressor is engineered specifically for heavy-duty mining operations and demanding industrial environments. It features a robust motor design with twin cylinders and a large-capacity air tank, ensuring a consistent and reliable air supply for pneumatic tools. Built with safety and durability in mind, it includes essential pressure relief systems to maintain performance under rigorous working conditions.

Technical Specifications

Compressor Type	Piston
Cylinder Configuration	Twin Cylinder
Primary Applications	Mining, Heavy-duty Industrial, Pneumatic Tool Operation

Features & Safety

Safety Equipment

- Pressure relief valves
- Durable heavy-duty construction

Condition

Used
