

UV-C Germicidal Lamp with Boric Quartz Glass

This germicidal lamp is constructed from boric and quartz materials. The lamp emits UV-C light, effective for sterilizing surfaces, air, and water by disrupting the DNA of microorganisms.

Product Overview

High-Efficiency UV-C Sterilization

This germicidal lamp utilizes a specialized boric and quartz glass construction to maximize UV-C transmission for effective disinfection. It is engineered to disrupt the DNA of harmful microorganisms, including bacteria, viruses, and molds, making it an essential component for air, surface, and water purification systems. Designed for reliability, the lamp features a standard G13 base and is available in a variety of power ratings to suit diverse industrial and laboratory applications.

Technical Specifications

Power Ratings

- 10
- 15
- 18
- 30
- 36

Voltage

- 110
- 220

Base Type

G13

Tube Material

Boric/Quartz Glass

Applications & Usage

Common Applications

HVAC Systems, Water Purification, Laboratory Equipment, Surface Sterilization, Air Disinfection

Design Features

Design Components

Quartz Glass Tube • Tungsten Filament • Two-pin Connection
