

V-Ribbed Belt for Power Transmission

V-ribbed belts offer a high horsepower rating, making them suitable for demanding applications. These belts have a 30%-50% higher horsepower capacity compared to multiple V-belts.

Product Overview

High-Efficiency Power Transmission

The V-Ribbed belt is a single, endless power transmission belt featuring longitudinal V-shaped ribs that mate precisely with corresponding V-grooves in sheaves. By combining the flexibility and convenience of a thin, one-piece flat belt with the strong gripping traction of multiple V-belts, this design offers superior performance. It is an ideal solution for industrial and automotive applications requiring reliable power delivery and reduced slippage.
