

Vacuum Aluminum Transport Bag

This vacuum aluminum transport bag is designed for the safe and efficient transport of materials under vacuum conditions. Constructed from high-grade aluminum, the bag offers durability and resistance to corrosion.

Product Overview

Industrial Vacuum Transport Solution

This high-grade vacuum aluminum carrying bag is engineered for the secure and efficient transport of sensitive materials under controlled vacuum conditions. Constructed for industrial durability, it features a robust structural design and a highly reliable sealed lid system. With multiple connection points for vacuum lines and instrumentation, it ensures consistent integrity throughout the handling process.

Technical Specifications

Suitability

- Industrial material transport
- Vacuum-maintained handling
- Laboratory and instrumentation use

Material	High-grade aluminum
Key Features	Vacuum Sealed, Corrosion Resistant, Leak-proof, Industrial Grade
Connection Points	2
