

# Vacuum Cleaner Electric Motor

This electric motor is designed for vacuum cleaners and similar applications requiring strong suction power and efficient operation. It features a robust stator and rotor assembly, optimized cooling system for extended lifespan, and durable construction for reliable performance under demanding conditions.

## Product Overview

### High-Performance Vacuum Motor

This high-performance electric motor is specifically engineered for vacuum cleaners and similar applications requiring robust suction power and reliable, efficient operation. Featuring a durable stator and rotor assembly alongside an optimized cooling system, it is designed for extended service life under demanding conditions. The motor is built for quiet operation and minimal vibration, making it an excellent choice for both residential and commercial cleaning equipment.

## Technical Specifications

### Key Features

- Robust stator and rotor assembly
- Optimized cooling system for extended lifespan
- Quiet operation technology
- Low-vibration design

### Performance Highlights

**1 High**

Reliability Rating

**2 Low**

Operating Noise

### Application

Residential Cleaning, Commercial Cleaning, Vacuum Equipment
