

Vacuum Cleaner Motor 1200W

This high-performance vacuum cleaner motor is engineered for efficient dust and debris removal. Its robust construction ensures extended durability and reliable operation.

Overview

High-Performance Vacuum Motor

This 1200W vacuum cleaner motor is engineered for superior suction power and reliable debris removal. Built with thermally protected windings and an optimized airflow design, it ensures longevity even during demanding cleaning tasks. Its compact architecture allows for seamless integration into diverse vacuum cleaner models, balancing high-speed performance with low operational noise.

Performance Metrics

Power Consumption

1200 W

Max Power

Technical Specifications

Operating Voltage	120 V
Operating Frequency	60 Hz

Features

Design Highlights

- Optimized high-speed fan design
- Engineered for low noise output
- Compact form factor for easy integration
- Enhanced airflow efficiency

Safety & Durability	Thermally Protected Windings, Overheat Protection, Robust Construction
