

# Vacuum Tube Solar Water Heater

This solar water heater can be operated automatically when connected to an intelligent solar controller. Its simple structure allows for easy plug-in installation on both flat and inclined roofs, and it can be used with an auxiliary electric booster.

## Product Overview

### Sustainable Hot Water Solution

This vacuum tube solar water heater offers a highly efficient and sustainable way to generate hot water for residential or commercial use. Featuring a simple plug-in installation design, it can be mounted on both flat and inclined roofs to suit various environments. With robust thermal insulation and high-quality materials, this system ensures reliable performance even in challenging weather conditions.

## Technical Specifications

Insulation Thickness	65 mm
Inner Tank Material	SUS304-2B stainless steel
Key Features	Vacuum Tube Technology, Wind Resistant, Corrosion Resistant, Automatic Operation

## Installation & Compatibility

### Roof Compatibility

- Flat roof
- Inclined roof

### Suitable Applications

Residential • Commercial • Camping Areas • Holiday Residences

## System Performance

### Operational Highlights

**65 mm**
