

VAG IMMO3 Key Transponder Programming Interface Cable

This interface cable is designed for use with VAG IMMO3 tools, enabling key transponder programming and immobilizer functions. It features an OBDII connector for connecting to the vehicle's diagnostic port and a DB9 serial connector for interfacing with programming devices.

Product Overview

Professional VAG Immobilizer Interface

This specialized interface cable is designed for automotive technicians and locksmiths working with VAG group vehicles. It facilitates essential security tasks, including reading IMMO login codes and performing key learning and adaptation via the vehicle's diagnostic connector. The device is engineered for reliable communication with specific engine control units, providing a streamlined solution for immobilizer system maintenance.

Technical Specifications

Diagnostic Protocol

K-Line Diagnostic

Incompatible Systems

- CAN Bus Diagnostic
- Golf-5
- Touareg

Supported Model Years

June 2000 – 2004

Supported ECU Types

EDC15, ME7.1, ME7.1.1, ME7.5

Functionality

Core Functions

- Read IMMO Login Code
- Key learning and adaptation
- Engine ECU login code retrieval
