

# Valve Refacing Machine

This precision valve grinder is designed for accurate and efficient valve refacing. It is equipped with a coolant system to maintain optimal grinding temperatures and extend wheel life.

## Overview

### Professional Valve Refacing Solution

The VR90 valve grinder is specifically engineered for precision grinding of engine valves in automobiles and tractors. This machine balances robust construction with flexible operation, ensuring high-quality results during engine rebuilding and routine maintenance. Its user-friendly interface and adjustable control settings allow operators to achieve accurate angle and depth control across a wide range of valve types.

## Technical Features

### Core Features

- Compact design for space efficiency
- Integrated coolant system for temperature regulation
- Adjustable angle and depth settings
- High-durability construction for heavy-duty use

### Applications

Automotive Engines, Tractor Engines, Engine Rebuilding, Valve Maintenance
