

Variable Transformer Welding Machine

This variable transformer welding machine is engineered for industrial environments. It features adjustable voltage and current settings, making it suitable for a variety of welding applications.

Overview

Industrial Variable Transformer Welder

The HSR-500 is a heavy-duty variable transformer welding machine engineered for demanding industrial environments. It provides users with precise control over welding parameters, allowing for high-quality results across various applications. Designed for both mobility and stability, this unit features a robust chassis equipped with wheels and handles to ensure efficient operation on the shop floor.

Performance

Model Number	HSR-500
Key Capabilities	Variable Voltage, Adjustable Current, Industrial Grade

Design

Mobility Features

- Integrated heavy-duty wheels
- Ergonomic maneuvering handle
- Robust industrial chassis

Control Panel Components

- Precision adjustment knobs
- Integrated analog gauges
