

Vehicle Diagnostic Interface Cable

This diagnostic cable is used for vehicle diagnostics, fault finding, and module coding. It is compatible with various Volkswagen, Audi, Skoda, and SEAT models.

Product Overview

Professional Diagnostic Capabilities

This VAG diagnostic interface cable offers comprehensive support for fault finding, module coding, and measuring values for Volkswagen, Audi, Seat, and Skoda vehicles. Designed for professional use, it supports the advanced UDS/ODX/ASAM protocols and includes updated firmware for modern vehicle compatibility. The interface connects directly to the vehicle's OBD-II port, providing reliable communication with a PC via USB for enhanced diagnostic stability.

Technical Specifications

VCDS Version	11.3
Supported Protocols	UDS, ODX, ASAM, TP1.6, CAN-BUS
Fault Code Database	13000
Vehicle Years Covered	1994 - 2011

Compatibility
