

# Vehicle Parking Heater System

This parking heating system provides efficient and reliable heating for vehicles. It is engineered for easy installation and operation, ensuring a comfortable environment inside the vehicle during cold weather conditions.

## ADDITIONAL IMAGES

## Overview

### Independent Heating Solution

The Vehicle Parking Heater System is an independent in-vehicle heating device that operates separately from the car engine. It allows for the preheating of both the engine and the cab in cold environments without needing to start the engine. This process eliminates cold start wear, extends engine life, and ensures a comfortable cabin environment.

## Application

### Compatible Vehicles

Cars, Buses, Construction Vehicles, Yachts

## System Components

### Included Components

- Heater unit
- Exhaust muffler
- Fuel pump
- Fuel filter
- Control unit
- Mounting accessories

## Technical Details

### Control Module Model

JN-H06-HHG1-U01
