

Vehicle Wheel Alignment System

This wheel alignment system is a precision instrument for accurate vehicle wheel alignment. It features advanced sensor technology, a user-friendly interface, and robust construction for reliable performance.

Overview

Professional Vehicle Wheel Alignment System

The AlignMaster Wheel Alignment System is a precision instrument engineered for high-accuracy vehicle geometry adjustments. Designed for professional automotive service centers and workshops, the system utilizes advanced sensor technology to ensure exact alignment performance. Its robust construction and user-friendly interface provide a reliable solution for streamlining daily maintenance workflows.

Technical Features

Included Components

- Adjustable measuring heads
- Comprehensive software package
- Stable measurement platform
- Advanced sensor modules

System Capabilities

Advanced Sensor Technology, Precise Measurement, Adjustable Measuring Heads, Professional Grade

Certifications

Suitability

Automotive Service Centers • Professional Workshops
