

Vendor Managed Inventory (VMI) Software

This software manages Vendor Managed Inventory (VMI) within a supply chain. It optimizes inventory levels and streamlines communication between suppliers and manufacturing plants.

Overview

Vendor Managed Inventory (VMI) Solution

This VMI software streamlines supply chain operations by automating the flow of information between suppliers and manufacturing facilities. It optimizes inventory levels through real-time feedback and replenishment notifications based on predefined MIN/MAX parameters. By consolidating deliveries and automating payment processes based on actual deliveries, it increases efficiency and reduces operational costs for complex supply chains.

Core Functionalities

Key Features

- Real-time inventory feedback
- Automated replenishment notifications
- MIN/MAX stock level management
- Consolidated shipment handling
- Automated delivery-based payment processing
- Comprehensive inbound and outbound tracking

Process Flow
