

# Veneer Production Line

This woodworking machinery line is designed for high-volume veneer sheet production. It features automated log handling, peeling, cutting, and stacking processes.

## Product Overview

### Industrial Veneer Production Solution

This high-volume veneer production line is engineered for precision and continuous operation in industrial woodworking environments. The integrated system streamlines the entire manufacturing process, from automated log conveying to the final stacking of cut veneer sheets. Built for durability and efficiency, it features robust mechanical construction and hydraulic controls to ensure consistent quality in high-output scenarios.

## System Components

### Integrated Modules

- Log conveying system
- Rotary peeling lathe
- Veneer clipper
- Veneer stacking system

## Operational Features

### Primary Application

High-Volume Production • Industrial Woodworking

### Operational Control

Automated Log Handling, Hydraulic Controls, Precision Cutting, Continuous Operation
