

Venetian Blind Slat Forming Machine

This venetian blind slat forming machine shapes metal strips into venetian blind slats. It integrates rollers, forming stations, and a cutting mechanism for efficient slat production.

Product Overview

Professional Venetian Blind Slat Forming

This venetian shutter pressure equipment is engineered for the high-volume production of venetian blind slats. It utilizes a sophisticated series of rollers and forming stations to accurately shape metal strips into the desired profile. Equipped with an integrated cutting mechanism and an automated electrical control system, this machine ensures precision, consistency, and efficiency in large-scale manufacturing environments.

Technical Details

Key Components

- Progressive forming stations
- Precision rollers
- Integrated slat cutting mechanism
- Electrical control panel

Manufacturing Process

Roll Forming, Automated Cutting, High-Volume Production

Drive System

Motor-driven system

Control Interface

Integrated Electrical Panel
