

Vertical Broaching Machine

Heavy-duty vertical broaching machine designed for machining internal keyways, splines, and other complex shapes in large workpieces. It features a robust frame, hydraulic power system, and precision control for accurate and efficient material removal.

Overview

Professional Vertical Broaching Solution

This heavy-duty vertical broaching machine is engineered for high-precision machining of internal keyways, splines, and complex geometries in large workpieces. It features a robust frame architecture combined with a reliable hydraulic power system to ensure consistent performance in high-volume production environments. Ideal for the automotive, aerospace, and heavy manufacturing sectors, the machine incorporates integrated coolant, lubrication, and safety systems for enhanced operational reliability and operator protection.

Machine Specifications

Safety and Maintenance

- Safety interlocks for operator protection
- Automated lubrication system
- Integrated coolant delivery system

Core Features

Internal Keyway Machining, Spline Machining, Hydraulic Power System, Automatic Lubrication

Applications

Target Industries

Automotive • Aerospace • General Manufacturing
