

Vertical Bucket Conveyor System

This bucket conveyor is designed for the vertical transportation of bulk materials. It utilizes a series of buckets attached to a chain or belt to move materials efficiently.

Overview

Efficient Vertical Material Handling

The Vertical Bucket Conveyor System is engineered for the reliable vertical transportation of diverse bulk materials, ranging from powders and granules to small solid items. Featuring a robust construction designed for demanding industrial environments, the system utilizes a series of buckets attached to a chain or belt mechanism to elevate materials efficiently. With integrated mobility via wheels and adjustable supports for uneven surfaces, this unit offers both durability and operational flexibility for various facility layouts.

Technical Specifications

Transport Mechanism	Bucket and chain/belt system
Compatible Materials	Powders, Granules, Small solid items

Operational Features

Mobility & Stability

- Mounted on wheels for easy positioning
- Adjustable supports for uneven surfaces

Control Interface	Yes
