

# Vertical Cantilever Sump Pump

This vertical cantilever pump is designed for industrial applications involving corrosive or abrasive fluids. Its robust construction features a submerged impeller and a motor mounted above the fluid level, ensuring reliable and efficient pumping performance.

## Product Overview

### Industrial Vertical Cantilever Pump

This vertical cantilever sump pump is specifically engineered for industrial applications involving the handling of corrosive or abrasive fluids. Featuring a robust, space-saving design with a submerged impeller and an externally mounted motor, it offers reliable pumping performance in challenging environments like sumps, tanks, and pits. Its configuration ensures protection against motor damage and provides excellent accessibility for routine maintenance and inspection.

## Technical Specifications

Pump Configuration	Vertical Cantilever
Key Design Elements	Submerged Impeller, Top-Mounted Motor, Corrosion Resistant, Abrasion Resistant

## Applications

### Recommended Use Cases

- Industrial fluid processing
- Agricultural drainage
- Irrigation systems
- Fluid transfer
- Sumps, tanks, and pits

## Maintenance

Ease of Maintenance	Yes
