

Vertical Centrifugal Water Pump

This centrifugal single-impeller water pump is designed for flow irrigation systems. It boosts and maintains pressure in domestic water supply systems using water from a well or tank.

Product Overview

Efficient Vertical Centrifugal Pump

The Vertical Centrifugal Water Pump is designed for efficient and reliable water circulation in various HVAC&R applications. Its vertical design saves valuable floor space and simplifies installation, while the robust construction ensures long-lasting performance. Equipped with thermal overload protection and a high-performance motor, this pump is ideal for cooling towers, chillers, and general water supply systems.

Technical Specifications

Model	LF11-550
Voltage	115 V
Power Consumption	25 W
Rated Current	0.4 A
RPM	3000 RPM
Max Head	4.5 ft

Operating Limits

Max. Suction Head	8 m
Max. Liquid Temperature	60
Max. Ambient Temperature	40

Features

Key Features

- Compact vertical design
- Quiet operation
- Easy installation
- Low maintenance
- Thermal overload protection
- Continuous duty

Suitable Applications

HVAC&R, Cooling Towers, Chillers, Water Supply, Industrial Processes
