

Vertical Cloth Cutting Machine

This vertical cloth cutting machine is designed for efficiently cutting multiple layers of fabric. It utilizes a reciprocating blade action to ensure clean and precise cuts.

Overview

Professional Vertical Fabric Cutter

This vertical cloth cutting machine is engineered for precision and efficiency in high-volume textile environments. Designed to handle multiple layers of fabric simultaneously, it utilizes a reliable reciprocating blade action to ensure clean, consistent cuts. Built with a robust metal frame and stable base, this tool is an essential asset for garment manufacturing and upholstery applications.

Technical Specifications

Blade Mechanism	Reciprocating
Build Material	Metal Frame, Metal Base

Features

Key Features

- Multi-layer fabric cutting capability
- Integrated blade sharpening device
- Ergonomic maneuverability handle
- High-stability base design

Application

Suitable Applications

Textile Manufacturing • Garment Production • Upholstery
