

Vertical CNC Machining Center

This vertical machining center is designed for precision metal cutting. Its robust construction ensures stability and accuracy during various machining operations.

Overview

High-Precision Vertical Machining Center

The XH718 is a professional-grade vertical machining center engineered for high-precision metal cutting operations. Built with a robust structure for maximum stability, it ensures consistent accuracy during complex milling, drilling, and tapping tasks. Equipped with advanced automated tool changing capabilities and a responsive CNC control system, this machine offers an efficient solution for demanding industrial production environments.

Machine Specifications

Safety & Containment

- Enclosed work area
- Chip containment system
- CNC parameter control

Capabilities

Milling, Drilling, Tapping

Performance

Key Operational Metrics

718
