

Vertical CNC Milling Machine

Precision vertical milling machine designed for versatile machining operations. It features a robust frame, a high-speed spindle, and a user-friendly CNC control system for accurate and efficient material removal.

Overview

Precision Vertical Milling

This precision vertical milling machine is engineered for versatile machining operations, featuring a robust frame and a high-speed spindle for reliable performance. It is equipped with a user-friendly CNC control system that ensures accurate and efficient material removal for complex part geometries. The inclusion of a multi-axis table and an integrated coolant system provides the thermal stability and flexibility required for prototyping, mold making, and small-batch production.

Technical Specifications

Power Rating

1000 W

Spindle Power

Key Features

CNC Control System, Multi-axis Table, Coolant System, High-speed Spindle

Applications

Ideal Applications

- Prototyping
- Mold Making
- Small-batch Production
